Idaho Department of Agriculture Approves Jaeco Check Valves

Jaeco 316 Stainless Steel Check Valves have been listed by the Idaho Department of Agriculture as Approved Chemigation Equipment for use as injection line check valve to prevent the backflow of water into the chemical tank, causing a possible overflow mixture of water and chemical onto the ground or into the water source.

Available in two styles, O-Ring Poppet and Ball, Jaeco check valves are widely used on any liquid system that require a spring loaded check valve for positive, no drip, shutoff and/or backflow protection. The valves also help prevent the full pressure of the irrigation system from blowing the hose.

Both styles have a pressure break of 10 PSI and are available in 1/4", 3/8", 1/2", 3/4" and 1" sizes. Valves with a pressure break of 2 PSI are also available. O-ring Poppet valves come standard with Viton[®] or Teflon O-rings with other materials available

Jaeco also manufactures pump valves that fit most Injection Pumps.
