For Immediate Release

Diaphragm Injection Pumps That Are Reversible and Can Be Run Dry

Designed to be reversible, for use on pivot irrigation systems, and can be run dry without pump failure, AgriFram 1™ hydraulically actuated diaphragm metering (injection) pumps provide accurate, completely leak-proof metering of Chemigation liquids.

AgriFram pumps are engineered for simplicity of design in order to achieve quality, durability and virtually maintenance-free reliability at a competitive price. They are available in simplex and duplex models offering a wide range of capacities from 0.8 to 56 GPH at pressures up to 1,200 PSI with an accuracy of $\pm 0.5\%$ at steady state.

Liquid ends are available in a variety of materials to meet a broad spectrum of chemical requirements. For the application of Sulfuric acid or Infuric AgriFram pumps are available with liquid ends made of Alloy 20 or PVC.

AgriFram diaphragm pumps come powered by electrical motor, V-belt or gasoline drives. All electric drive pumps feature standard motor reversibility.

Jaeco also manufactures packed plunger metering pumps with capacities from 0.38 to 682 GPH at pressures up to 7,200 PSI, stainless steel (SS) ball and poppet check valves and SS compression fittings.
