Jaeco Creates New Electronic Product Information System

Jaeco Fluid Systems, Inc., a leading manufacturer of metering pumps, check valves and compression pipe and tube fittings, has created a new, on-line, electronic product information system for its entire product line. The new system gives customers the ability to instantly view and download product brochures and a wide range of engineering, design and operation information.

The site is organized by product and then by industry making it easy for the user to identify which product fits their particular needs. The technical information sections on each product include engineering drawings, operating instructions and a parts list enabling customers to access data, as needed, 24/7/365.

Included as part of the system is a product availability section with a "Quick Order Form" which allows ordering of selected products for shipment within 48 hours. The system also makes it possible to order virtually any spare part for same day shipment (orders must be received before noon EST).

"We believe that our new Product Information System (www.jaecofs.com) will give customers total access to virtually every piece of data relevant to our products," said Rich Murdy company General Manager, "this in turn will make it possible for them to get the information they want when and where they need it."
